Flour is a product of mechanical grinding (milling) and sifting of grains.

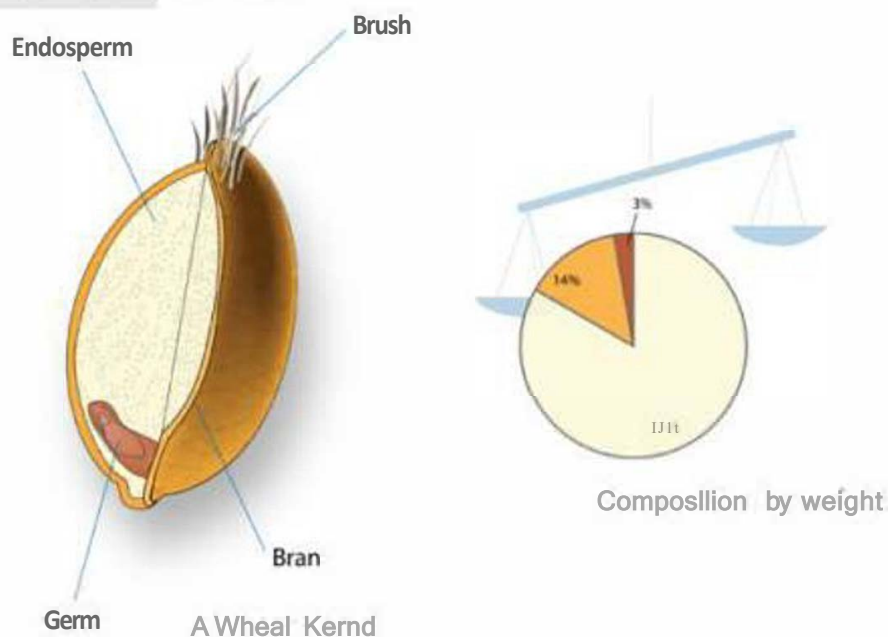

From a nutritional point of view, flour is a semi-finished product that serves as a basic raw material to produce bread, pastries, biscuits, pastas and cakes, or as an admixture in the preparation of meals.

Wheat grain consists of the nucleus (endosperm), the envelope (bran) and the germ.

By grinding the inner part of the grain of wheat (endosperm), we get different fractions of flour, which, depending on the ash and dry matter content, have different color and properties.

According to our regulations and ash content, wheat flour is divided into the following types: T-400, T-500, T-550 (white flour); T-710, T-850 (semi-white flour); T-1100 (black flour) and integral flour obtained by grinding the whole grain of wheat.

Classification of flour by ash content means that T-400 flour contains up to 0.43% ash, the T-1100 contains up to 1.15% ash, etc. The larger the flour type, the higher the percentage of ash and the darker the color.

Nutritional Value (per 100g)

According to its nutritional properties, black wheat flour obtained by grinding the outer parts of endosperm is considered high quality because of its high content of vitamins, minerals and dietary fiber.

White flours made by grinding the central part of the endosperm contain mostly starch and proteins, but unlike black flours, they have excellent baking characteristics.

In general, the quality of the flour depends on the quality of the milled wheat. Klas, as the largest flour producer in Bosnia and Herzegovina, has always encouraged the purchase of wheat from the domestic market producers and producers from the near region. In order to maintain a consistent quality of flour, local varieties are mixed with high quality wheat varieties from Hungary and Ukraine. In this way, Klas flour is always of high quality and nutritional properties.

Klas is one of very few manufacturers who do not add any enzymes or additives into the flour. We keep working on improving the quality, and today we can proudly say that we are producing top quality flour the consumers can trust. The complete production process is automated and at no point in time the wheat is exposed to any risks that might undermine its technological or health quality.

Klas' wheat mill is the largest and the most modern mill for processing wheat in the Southeastern Europe with total installed capacity of 450 tons per day. Klas produces all types of flour, T-400, T-500, T-550, T-710, T-850, T-1100 and special purpose flours, which have very specific quality parameters.

The best recognized brand in the market is the Zlatni puder (Golden Powder) (T-400), which has been the absolute market leader in the category of special purpose flour for over 40 years, as well as the flour T-500.

Bakery products are obtained by mixing flour with water, milk or other suitable liquids. In order to form dough table salt, baker's yeast, and other additives are used. The formed dough is then shaped, fermented and baked.

In addition to the above, other raw materials can be used, so their types can be classified in three groups of bakery products: basic types of bread and pastries, special types of bread and pastries, and other bakery products

Different types of wheat flour, groats, rye flour, and mixtures of different types of wheat, rye and other types of flour are used to prepare the basic types of bread and pastries.

Special types of bread and pastries are prepared from special raw materials using a special procedure. These are milk bread and pastry, fat bread and pastry, long-lasting bread and pastry, bread and pastries with eggs, enriched bread, butter.

In addition to flour, for their preparation milk, powdered milk, whey, whey protein, fat, butter, cream, eggs, sugar, dried fruits and other additives are used.

Other bakery products include stuffed pastry, "burek" (meat pie), bread-cake, donuts and similar products, pretzels, bread crumbs, etc. Each one of these products is prepared according to a specific recipe and technological process.

From the aspect of preparation, all types of bakery products are divided into freshly baked, semi-baked and deep frozen.

Klas Bakery produces over 60 types of breads and pastries every day and supplies fresh bread to stores in the Sarajevo region. All our baked products have been made in line with the highest quality standards, and most importantly, they have all been made with a lot of love... 

We are proud of the fact that every day we deliver to our customer's fresh breads and pastries that are of the best quality in their respective categories.

In addition to the daily program of freshly baked bakery products, we also produce special types of breads and pastries that have a multi-day shelf life, including all types of packaged breads.

PHYLLO DOUGH

Phyllo dough (stretched dough, pita dough) is a semi-finished product made of flour used for the preparation of various types of pies and pastry.

By merging tradition and contemporary trends, Klas produces for its consumers the phyllo dough using traditional recipes. Mechanical production simulates hand stretching of phyllo dough and thus preserves the quality required for making traditional dishes.

The offer includes phyllo dough with both longer and shorter shelf life, depending on customers' needs.

BAKERY

The innovative and special way of packaging Klas phyllo dough in "tubs" enables longer shelf life without using preservatives for extended freshness. These phyllo pastries are suitable for the preparation of savory and sweet dishes. For those who prefer a different preparation rather than the traditional one, Klas also offers buckwheat and integral flour phyllo dough.

Klas' semi-baked pastries are made from yeast dough and are ideal for preparing different types of hot sandwiches and other bakery delicacies.

Semi-baked pastries give consumers opportunity to be creative in making their favorite meal, and the process of preheating the pastry gives the feeling of real home-made dining.

Advantage: They are packed with inert gas used to reduce the use of additives and preservatives.

Inert gas extends the shelf life of products and prevents the formation of microorganisms.

PATISSERIE

Klas' patisserie is known for its handmade cakes. The cakes are made with special attention, according to the original recipes and in the traditional way.

Syrup-soaked cakes are part of the centuries-old tradition and heritage of the Turkish presence in these areas, an indispensable and favorite dessert on any table.

In addition to pastries, Klas range includes dry and fresh packaged cakes.

PÂTISSERIE

Klas offers the following syrup-soaked cakes: homemade baklava, tulumba, mini tulumba, rosette, hurma cake, apple pie, Divit baklava and homemade kadayif. Large commercial bulk packages are intended for individual cake sales and have a slightly shorter shelf life than the standard commercial cake packages.

Tulumba, which is deservedly called the "queen of syrup-soaked cakes", is also being marketed in the deep frozen commercial packaging.

PÂTISSERIE

Macarons are sweet meringue-based confectionary products made from almonds, sugar and egg-white. They originate from Italy; in the medieval ages they came to France and lately they have spread all over the world.

Parisian pastry maker Pierre Deffontaines in the mid-1800 merged the Swiss Ganache - glaze made of chocolate and cream, and crunchy macarons and thus created a treat with a unique appearance and taste.

Our macarons are hand-made and come in five different shapes and aromas.

With production capacities installed and commissioned in 1972, Klas' factory "Sarko" is among the oldest in Bosnia and Herzegovina.

The production of this plant used to focus on Sarko sweet rolls.

Today in this plant, and through the confectionary program, Klas produces over 40 various products. Some of the products include Sarko rolls and mini-cakes, Bosanski Lokum, Zlatni Lokum, mini-strudels and wafers and a broad assortment of tea cakes.

CONFECTIONARY

According to the stories, the lokums used to be prepared only for the most loved ones, to take them when going to long and uncertain travels, to have the lokum aroma remind them of the home they had left behind, and, wherever they were, to make them feel loved. Over time, this has become a favored sweet all over the world, and the food company Klas d.d. Sarajevo is the first and only industrial manufacturer of lokums in this part of Europe who uses the original, oriental recipe.

In 2013, Klas broadened its assortment to include the Zlatni Lokum (shortbread), by enriching the original recipe of the Bosanski Lokum with high-quality ingredients that offer a completely new experience.

CONFECTIONARY

FIT is Klas' wholegrain cookie first produced in 2015, developed in the Development Department of Klas and is fully made by the domestic experts. This is a healthy product, and one quarter of the cookie are the oat flakes that are proven to reduce the blood cholesterol, thus helping prevent heart diseases.

Oat flakes are important source of dietary fibers, and one of the richest sources of tocotrienol (a type of vitamin E). They contain vitamins B1, B5, folic acid, biotin, vitamin E, as well as zinc, magnesium, copper, iron, manganese.

Eating oats slows down the increase of blood sugar levels after the meal, and its decrease before the meal. This helps one feel full for longer, making it easier to limit the amount of consumed food and control the weight.

Studies have shown that women who consume more dietary fibers have less circulating estrogen, which is a risk factor for breast cancer, while the children who had consumed oats had 50% less chance to develop obesity later in life compared to children who had not eaten oats.

PASTA

From 1948, when the pasta factory was built, then called "Bosanka", and in 1976 when it got its new name "Sarajka", until today, Klas has been one of the largest pasta producers in Bosnia and Herzegovina.

In addition to pasta, prepared according to traditional recipes, such as Tarhana and pasta, 10 types and about 100 tons of high-quality pasta are produced monthly with Italian technology and equipment.

In 2017, Klas developed another product - the Rahat Lokum (Turkish Delight) - in three variants: rose, walnut, and mix. The Turkish Delight is a type of dessert made up of mass resembling jelly, and consists of rice or starch flour, with powder sugar sprinkled over the dessert after it is made. For making different types of this dessert, various juices are added (e.g. lemon juice), rose tree syrup, sour cream, chocolate dressing, chopped walnuts, hazelnuts, almonds, pistachios, etc.

The words "rahat" and "lokum" come from Turkish language, and together they mean pleasure for the throat. Turkish delight arrived to this region more than 500 years ago and was served exclusively to upper classes at courts.

It used to be wrapped in silk and brought to the court. Today, having Bosnian coffee with Turkish delight or other oriental sweets has become a ritual in homes all over Bosnia and Herzegovina. Turkish delight is served to dear guests or gifted to loved friends.

TRADITION

Tahini halva is originally a Turkish treat made from tahini (ground sesame seeds), sugar or honey, and vegetable oil.

Sesame seeds contain unsaturated fatty acids, proteins, vitamin E, vitamin B, in the form of folium and nicotinic acids, and minerals such as magnesium, calcium and phosphorus. Klas offers three types of weight options for tahini halva and tahini paste in a jar.

FROZEN FRUITS

The company Klas d.d. owns freezers and plants for storing and processing fresh berries and wild forest fruits. It processes raspberries, blackberries, blueberries, strawberries, sour cherries and cranberries.

After careful processing, the purchased fruits are frozen in our freezers via a special procedure in the shock-tunnel.

With this rapid deep-freeze method, the nutritional value of the fruit remains preserved. Freezing is the best preservation process since basic ingredients and labile components such as vitamins are best preserved.

Product name	Weight(g)	Transport packaging (pcs)	Boxes on pallet	Pieces on pallet	Shelf life (days)	Keeping and storage	EANCODE

RICE

RICE

Rice is cereal rich in carbohydrates that are easily broken down and is an excellent source of energy. It does not contain cholesterol, so it is extremely healthy for people suffering from heart diseases.

Splendor rice is a quality rice of Italian origin, grown in the plains of the Vercellese region. For practical reasons, it is packaged in a commercial packaging box in two physically separate plastic bags of 450g each. The range consists of long grain rice, medium grain rice and round grain rice.
